

# UVC PHOTON™

## High Output HVAC UV Air Sanitizer by UV Defense

**UVC-PHOTON** combines the proven air purification technology of UVC with advanced oxidation and photocatalysis (Photon Hydroxylation Technology) — the latest in industrial strength UV lighting. It's super-purifying metal catalyst layer quickly neutralizes 99% of harmful bacteria, germs and viruses to deliver clean, breathable air.

Venting on all sides allows for ample air flow which means it can run longer with less chance of over-heating. Plus, it can be fully-integrated into convenient wall controls, which allows for sensory automation so the unit runs only when it's needed—further maximizing the potential efficiency of each unit. All metal construction. Its durable white-coated design might look like a spaceship, but it's still built like a tank.

Designed to mount in any HVAC system, new or existing. For commercial and industrial environments.

### Stats:

Lamp Technology: UVC Fluorescent  
Voltage: 120V AC, 50/60Hz  
Total Watts: 36W (shown)  
Unit Dimensions: 12" 4-Pin G23 Universal

### Ratings and Features:

Ultra-High Output UV Lamps  
Short-wave Germicidal Light  
Integrated Photon Mesh Catalyst  
Destroys Airborne Bacteria and Viruses  
Sanitizes up to 3,600 Square Feet

### UV Defense. We're Everywhere, for Everyone.

UV Defense delivers the most dependable, next-generation UV air, water and surface purification systems on the market today. Solutions are customized to suit the individual needs of most any industry. If it doesn't exist, we'll invent it. Each UV Defense product is built with the highest quality materials available, so they last longer, reach farther and eliminate pathogens better.
